Re: Management of Eurasian Watermilfoil on Kettle Moraine Lake

Dear Kettle Moraine Lake Property Owner or Occupant:

The Kettle Moraine Lake Association (the Association) with support from the Wisconsin Department of Natural Resources (WDNR), Onterra, LLC (Onterra), and Clarke Aquatic Services, Inc. (Clarke) proposes to manage approximately 18 acres on Kettle Moraine Lake with an aquatic herbicide to control the excessive growth of the aquatic invasive species, Eurasian watermilfoil (EWM). The Association proposes to conduct applications of ProcellaCOR EC to infestations sometime in spring or summer, 2022 to be performed by Clarke. The project will proceed only after the Association obtains a permit from the WDNR.

Notification of the exact date of application and water use restrictions associated with the use of ProcellaCOR EC will be provided by the posting on the shoreline in and adjacent to management areas, and public access points.

The water use restrictions associated with use of ProcellaCOR EC are noted below:

***There are no swimming, fishing, or other recreational restrictions. Do not use water from application area for non-turf irrigation purposes for 3 days, turf irrigation is fine immediately following applications.***

Additional information on the proposed management including a completed copy of the permit application, site map and WDNR Chemical Fact Sheet on ProcellaCOR can be found at <https://kettlemorainelake.org>

**For questions about the project or to request a hard copy of the permit application, please contact:**
